Session 130: Uncreated energy is the source of created energies

Original Question: Earth as a living conscious entity

Summary:
Does the earth have feelings? Not in the sense that humans would perceive. It is change that is occurring. Interchange of energies consuming each other. Our physical bodies is made of the same stuff as the earth. When you fear something, you are in agreement that it can harm you. Each man becomes his own savior. He must become a tuned in his body.

One must reach the fear aspects within oneself in order to free your self to explore the other energy regions.

She talks about the feeling of the different seasons. Spring is the pregnancy period and give birth in the summer.

Report by Stephen Ng Qui Sang
